DETAILED ACTION

This application is continuation of application 10/613652, which is patented as US 6,750,071.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

Claims 1-6 are rejected under 35 U.S.C. 102(e) as being anticipated by Wasserbauer et al (US 6,618,414

The applied reference has a common inventor and common assignee with the instant application. Based upon the earlier effective U.S. filing date of the reference, it constitutes prior art under 35 U.S.C. 102(e). This rejection under 35 U.S.C. 102(e) might be overcome either by a showing under 37 CFR 1.132 that any invention disclosed but not claimed in the reference was derived from the inventor of this application and is thus not the invention "by another," or by an appropriate showing under 37 CFR 1.131.

Wasserbauer et al discloses a method of making VCSEL device by forming an annular ohmic itracavity contact pad "118" adjacent to the optical cavity"116"; forming mesa in plurality of VCSEL layers in accordance annular intracavity contact pad to expose the oxide aperture layer, oxidizing the oxide aperture layer to form oxide aperture "140" that is self-aligned with annular ohmic intracavity contact pad; forming upper mirror adjacent to said annular intracavity contact pad. Wasserbauer et al

Art Unit: 2812

teaches forming active region comprising one or more active layers and forming delta doped upper cladding layer"130" and spacer layer ""160" adjacent to said optical cavity.

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

Claims 1-7 are rejected under 35 U.S.C. 102(a) as being anticipated by Naone et al US 2002/0150135A)

Naone teaches a method of making VCSEL device by forming an annular ohmic itracavity contact pad "944" adjacent to the optical cavity "950"; forming mesa in plurality of VCSEL layers in accordance annular intracavity contact pad to expose the oxide aperture layer, oxidizing the oxide aperture layer to form oxide aperture "22" that is self-aligned with annular ohmic intracavity contact pad; forming upper mirror '970" adjacent to said annular intracavity contact pad "944". Naone et al teaches forming active region comprising one or more active layers. Naone et al teaches spacer layer ""962" adjacent to said optical cavity (see fig.20 and related description). Naone also teaches delta doping cladding layer in originally presented claims 30,31. Naone et al teaches using multilayer photoresist "422" for forming intracavity (see fig. 7A and related description).

Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970);and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double

Application/Control Number: 10/811,624

Art Unit: 2812

patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims1-7 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-10 of U.S. Patent No. 6,750,071. Although the conflicting claims are not identical, they are not patentably distinct from each other because the scope of the instant claims is encompassed by the scope of the patented claims.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Savitri Mulpuri whose telephone number is 571-272-1677. The examiner can normally be reached on Mo-Fri from 8 a.m to 4.30 p.m.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, John Niebling, can be reached on 571-272-1679. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
